# **1. INTRODUCTION**

## **1.1. Project Overview**

Student admission problem is very important in educational institutions. This paper addresses machine learning models to predict the chance of a student to be admitted to a master's program. This will assist students to know in advance if they have a chance to get accepted. Newly graduate students usually are not knowledgeable of the requirements and the procedures of the postgraduate admission and might spent a considerable amount of money to get advice from consultancy organizations to help them identify their admission chances. Human consultant and calculations might be bias and inaccurate. The machine learning models are multiple linear regression, k-nearest neighbor, random forest, and Multi layer Perceptron. Experiments show that the Multi layer Perceptron model surpasses other models.

## **1.2. Purpose**

It helps student for making decision for choosing a right college. Here the chance of occurrence of error is less when compared with the existing system. It is fast, efficient and reliable. Avoids data redundancy and inconsistency. Very user-friendly. Easy accessibility of data. It helps you to understand as to how your profile can be further improved to secure an admit in your target college. It can guide you whether you need to retake the GRE or not, in order to improve your chances of landing an admit in your preferred university. Students from rural background find it difficult to do the necessary analysis and prepare a preference list. This idea will be beneficial for them. • Students who belong to multiple categories face difficulty in analyzing cut-offs in each of these categories and predict the best colleges they can get an admission in. Whatsoever is the student's rank, this application will aid them in finding the best branch and college for his/her rank. This accommodates the need of students to choose the best college and helps colleges too to recognize their stand in attracting students and finer prediction implies better results for the students.

## **2. LITERATURE SURVEY**

### **2.1. Existing problem**

Previous research done in this area used Naive Bayes algorithm which will evaluate the success probability of student application into a respective university but the main drawback is they didn't consider all the factors which will contribute in the student admission process like TOEFL/IELTS, SOP, LOR and under graduate score. Bayesian Networks Algorithm have been used to create a decision support network for evaluating the application submitted by foreign students of the university. This model was developed to forecast the progress of prospective students by comparing the score of students currently studying at university. The model thus predicted whether the aspiring student should be admitted to university on the basis of various scores of students. Since the comparisons are made only with students who got admission into the universities but not with students who got their admission rejected so this method will not be that much accurate.

## 2.3. Problem Statement Definition

I am Student	I'm trying to choose a right college	But I'm confused	Because there is too much on my plate	Which makes me feel anxiety
I am GATE Aspirant	I'm trying to crack GATE exam	But I couldn't find a way	Because I'm not aware of the cutoff	Which makes me feel restless
I am Student	I'm trying to choose a right university	But I couldn't fit my profile in any university	Because many websites are having paid section	Which makes me feel daunting
I am Graduated Student	I'm trying to take my career to next level	But I'm finding many ineffective websites	Because many websites are Ad-enabled	Which makes me feel distrustful
I am Student	I'm trying to pursue my studies in abroad	But user interfaces are hard to understand	Because I'm not aware of fees structure	Which makes me feel infuriated
I am Student	I'm trying to join a college	But I'm not able to choose	Because I don't know about the seat allotment	Which makes me feel vexed

### 3. IDEATION & PROPOSED SOLUTION

#### 3.1. Empathy Map Canvas

# Empathy Map Canvas

Gain insight and understanding on solving customer problems.

1

Build empathy and keep your focus on the user by putting yourself in their shoes.

Share your feedback

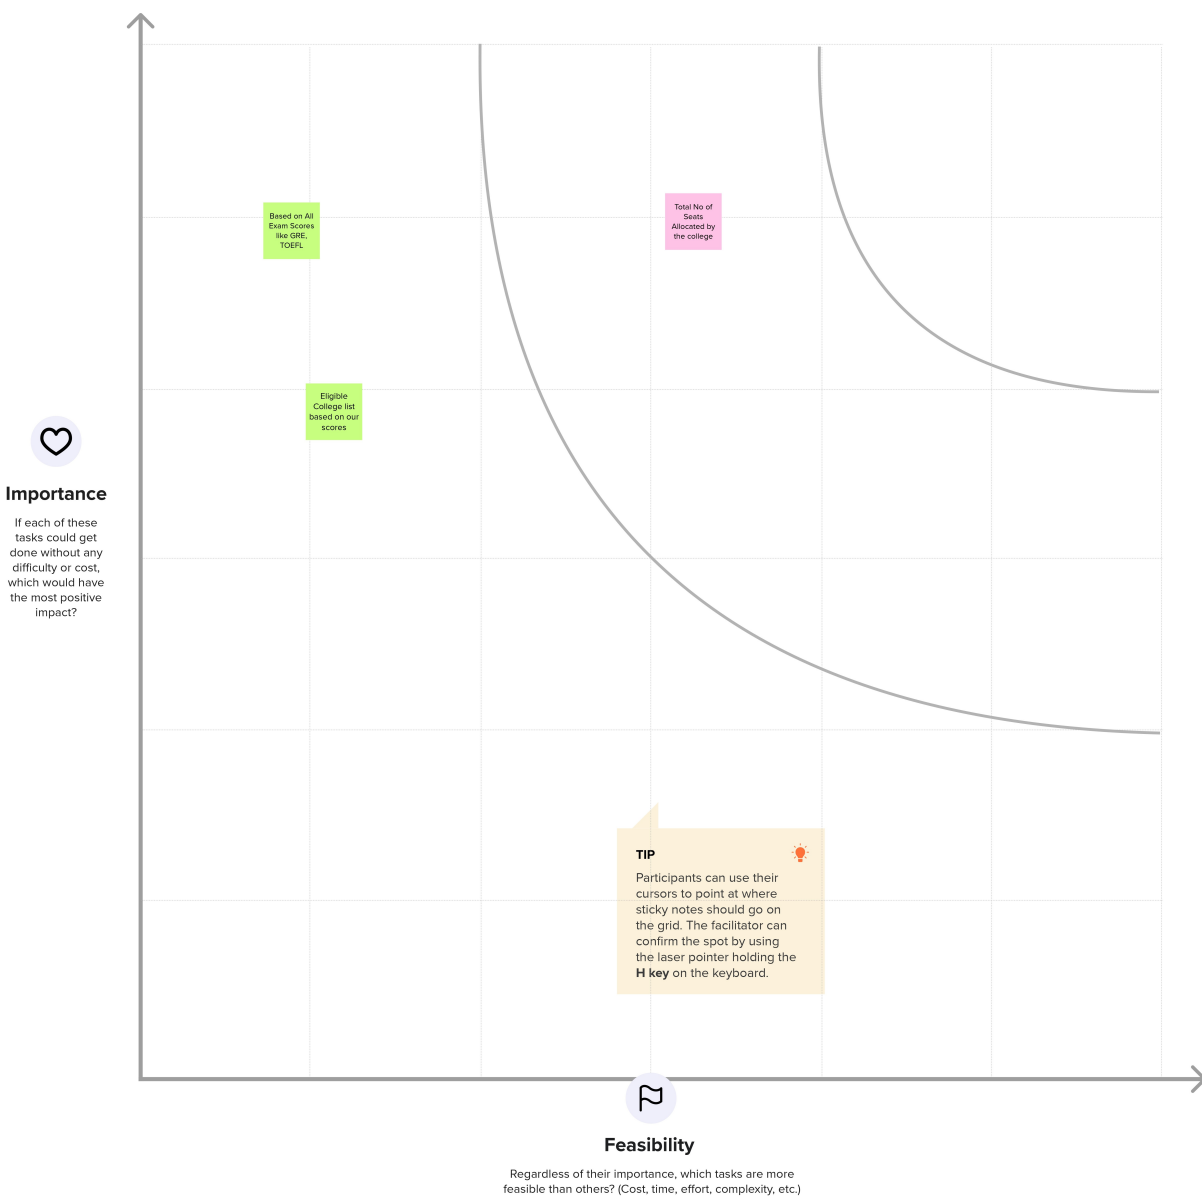

## 3.2. Ideation & Brainstorming

4

### Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

### **3.3. Proposed Solution**

#### **1. Problem Statement (Problem to be solved)**

I am a Student who is trying to choose a right college based on scores but I couldn't because I am not aware of eligibility criteria which makes me feel frustrated.

#### **2. Idea / Solution description**

This idea helps students to get the list of colleges to which they can apply as the system shortlists the colleges by comparing the student's marks and college's cut off and also predicting admission probability.

#### **3. Novelty / Uniqueness**

The main advantage of the project is the computerization of the entrance seat allotment process. The total time for the entrance allotment became lesser and the allotment process became faster.

#### **4. Social Impact / Customer Satisfaction**

It helps student for making decision for choosing a right college. Here the chance of occurrence of error is less when compared with the existing system. It is fast, efficient and reliable. Avoids data redundancy and inconsistency. Very user-friendly. Easy accessibility of data. It helps you to understand as to how your profile can be further improved to secure an admit in your target college. It can guide you whether you need to retake the GRE or not, in order to improve your chances of landing an admit in your preferred university. Students from rural background find it difficult to do the necessary analysis and prepare a preference list. This idea will be beneficial for them.

#### **5. Business Model (Revenue Model)**

Like most areas of the educational world these days, technology is forcing higher education institutions to do more with less. Institutions are under increasing pressure to admit more students, retain these students, and do their best to ensure student success. Facing this pressure, tech-savvy institutions can benefit greatly from predictive analytics and predictive models to help achieve their goals. Predictive analytics has also allowed colleges to better tailor their advising services and personalize learning to improve student outcomes as well as institutional efficiencies.

## 6. Scalability of the Solution

This will also help you to finalize your dream schools with a realistic road map, with the help of factual information coupled with a bit of reality check on your academic scores, credentials, work experience, your eminence over your peers. On the other hand, we have connoisseurs who shall work with you to amplify your prospects of receiving offers by ensuring that the universities you apply, do not digress from your profile, and chiefly your ambition. However with open source technology widely available, analytics tools are easier to access and are getting more affordable. The key lies in investing in analytics professionals that can contribute effectively to the entire process. Another concern is privacy and ownership for both students and teachers

## 3.4. Problem Solution fit

Problem-Solution fit canvas 2.0		Purpose / Vision To choose a right college based on scores	
Define CS, fit into	<b>1. CUSTOMER SEGMENT(S)</b> <b>CS</b> Who is your customer? <div>Students</div>	<b>6. CUSTOMER</b> <b>CC</b> What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. <div>Network connection, Cost, Time, Poor Knowledge, Lack of Resources.</div>	<b>5. AVAILABLE SOLUTIONS</b> <b>AS</b> Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital networking <div>Seat allotment, Eligibility criteria, Previous year cut off, Exam scores like GRE, TOEFL, GATE etc.</div>
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <b>J&amp;P</b> Which jobs-to-be-done (or problems) do you address for your customer? There could be more than one, explore different sides. <div>High Fees structure, Placement Opportunities &amp; Training, Courses Offered, Advanced Technology, Career development programmes.</div>	<b>9. PROBLEM ROOT CAUSE</b> <b>RC</b> What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. <div>Lack of Placement Opportunities and Not meeting the Expected cut off. Due to high Competition &amp; less Opportunities results in the difficulty to choose a right college.</div>	<b>7. BEHAVIOUR</b> <b>BE</b> What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend five time on volunteering work (i.e. Greenpeace) <div>Referring Articles &amp; Checking websites, Visiting College premises, Academic Performance, Fees structure and Enquiring Alumni.</div>
Focus on J&P, tap into BE, understand	<b>3. TRIGGERS</b> <b>TR</b> What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. <div>To put a road map for future career &amp; to get high paying job offers.</div>	<b>10. YOUR SOLUTION</b> <b>SL</b> If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. <div>This idea helps students to get the list of colleges by comparing the student's marks and college's cut off and predicting admission probability. Here the chance of occurrence of error is less when compared to existing system. It is fast, efficient and reliable. It helps you to understand as to how your profile can be further improved to secure an admit in your target college.</div>	<b>8. CHANNELS of BEHAVIOUR</b> <b>CH</b> <b>8.1 ONLINE</b> What kind of actions do customers take online? Extract online channels from #7 <div>Referring Articles &amp; Websites, Advertisements, College Reputation, Courses Available, List of Top Colleges, Eligibility Criteria, Previous Placements.</div> <b>8.2 OFFLINE</b> What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. <div>Visiting College campuses, Food &amp; Accommodation, Transport &amp; Lab facilities, Enquiring College students, Speaking to Academic representatives.</div>
	<b>4. EMOTIONS: BEFORE / AFTER</b> <b>EM</b> How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure -> confident, in control - use it in your communication strategy & design. <div>Confused, Anxious about peer group, Exciting &amp; Enthusiastic &amp; Friendly Faculties.</div>		
Identify strong TR & EM			Explore AS, Focus on J&P, tap into BE, understand Extract online & offline CH of BE

## 4. REQUIREMENT ANALYSIS

### 4.1. Functional requirement

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Details	Enter the Marks scored <ul style="list-style-type: none"><li>• HSC/Diploma score</li><li>• GRE score</li><li>• TOEFL score</li><li>• GATE score</li><li>• IELTS score</li><li>• CGPA etc.</li></ul>
FR-4	User Requirements	<ul style="list-style-type: none"><li>• Choose the tier of university they wish to apply and then get a prediction of their chances of admission to that level university based on the mapping between their requirements and the student's results.</li><li>• The system shall allow the user's details to be stored for the next time they return to the website.</li><li>• If the user chooses to take a new evaluation, the most recent inputs as well as prediction shall replace any previous data.</li></ul>

### 4.2. Non-Functional requirements

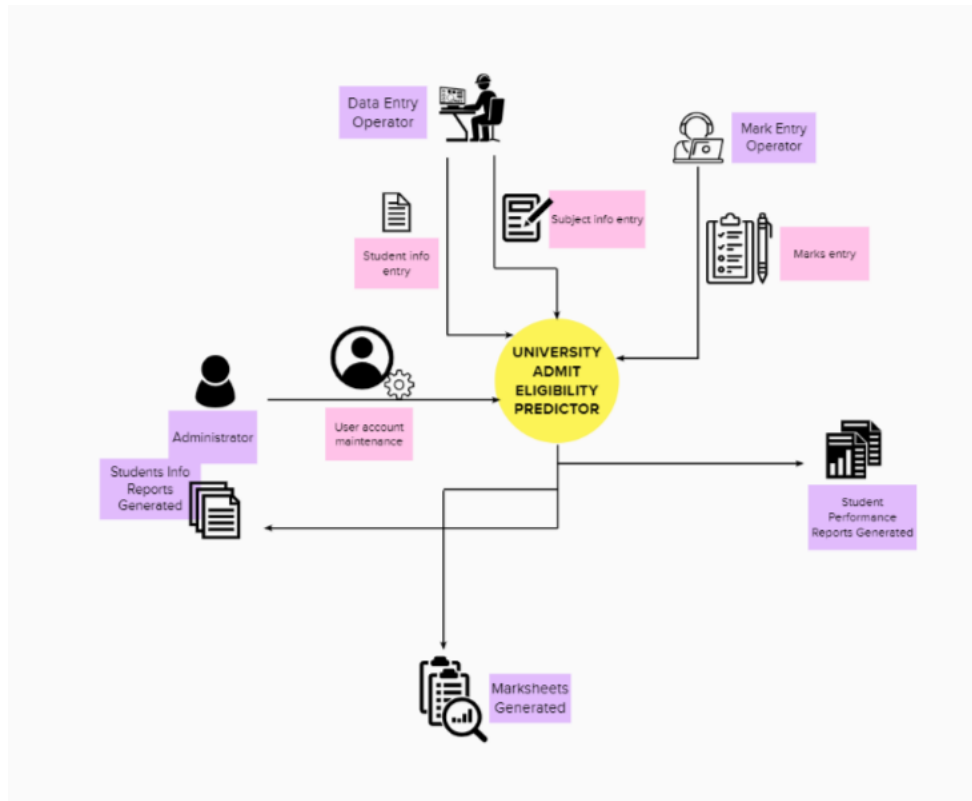

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	<ul style="list-style-type: none"><li>• No training is required to use the website.</li><li>• The form, home, about, FAQ and analysis pages load up within 10 seconds.</li><li>• The results from the predictor should not take more</li></ul>

		than 30 seconds.
NFR-2	<b>Security</b>	<ul style="list-style-type: none"> <li>● The system shall provide password protected access to the website to all users – students &amp; admins both.</li> </ul>
NFR-3	<b>Reliability</b>	<ul style="list-style-type: none"> <li>● University Application process itself being a tedious task students needs lots of endeavor and determination for completing overall application process.</li> <li>● It seems students have to work on lots of things when he/she prepares for application process.</li> <li>● It would definitely be easier for students if they get relief from step of selecting best suited universities and colleges for application.</li> <li>● This would encourage them to work vigorously on other application components so that their application candidacy will be potent enough to be selected.</li> <li>● This system shall be completely operational all hours of the day unless system failure or upgradation work is to be performed.</li> <li>● Downtime after a failure shall not exceed 24 hours.</li> </ul>
NFR-4	<b>Performance</b>	<ul style="list-style-type: none"> <li>● This system can support any number of users at a time.</li> <li>● The mean time to view a webpage over a 56 Kbps modem connection shall not exceed 5 seconds.</li> </ul>
NFR-5	<b>Availability</b>	<ul style="list-style-type: none"> <li>● Easy access of data.</li> <li>● Avoids data redundancy and inconsistency.</li> <li>● It is fast, efficient and reliable.</li> <li>● Very user friendly.</li> <li>● Chances of occurrence of error is less when compared to existing system.</li> </ul>

NFR-6	<b>Scalability</b>	<ul style="list-style-type: none"> <li>● This will also help you to finalize your dream schools with a realistic road map, with the help of factual information coupled with a bit of reality check on your academic scores, credentials, work experience, your eminence over your peers.</li> <li>● On the other hand, we have connoisseurs who shall work with you to amplify your prospects of receiving offers by ensuring that the universities you apply, do not digress from your profile, and chiefly your ambition.</li> <li>● However with open source technology widely available, analytics tools are easier to access and are getting more affordable.</li> <li>● The key lies in investing in analytics professionals that can contribute effectively to the entire process.</li> <li>● Another concern is privacy and ownership for both students and teachers.</li> </ul>

## 5. PROJECT DESIGN

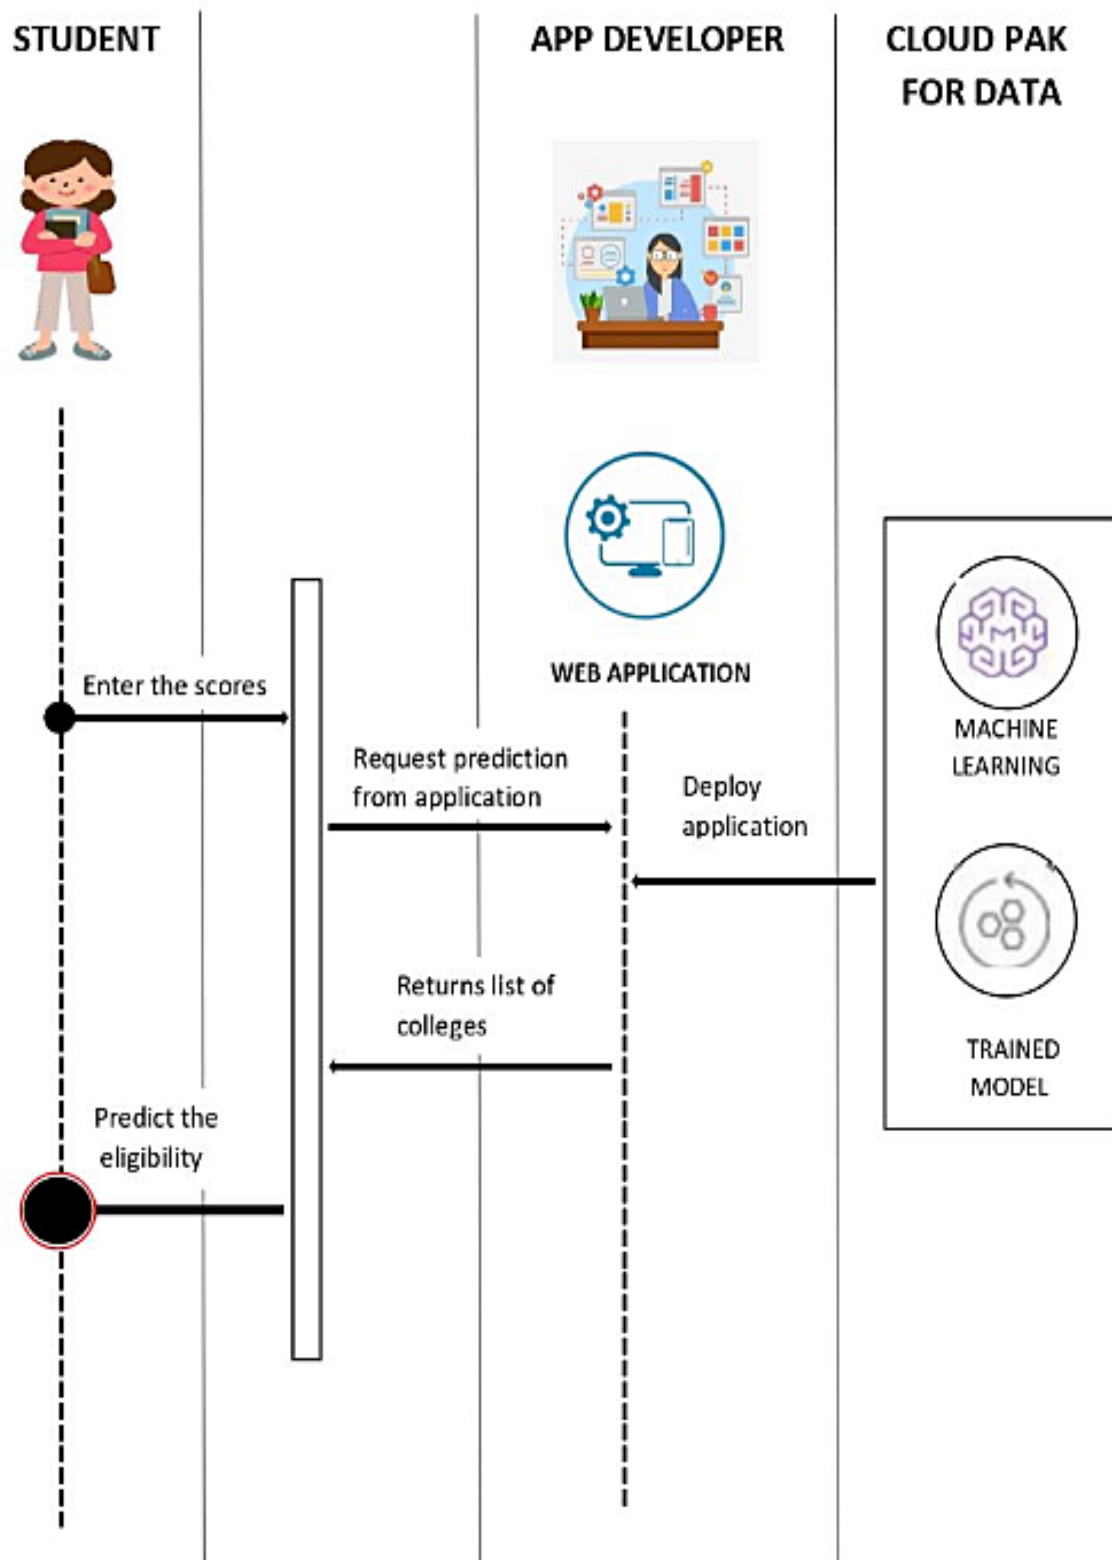

### 5.1. Data Flow Diagrams

### 5.2. Solution & Technical Architecture

#### Solution Architecture

1. This solution helps students to get the list of colleges to which they can apply as the system shortlists the colleges by comparing the student's marks and college's cut off.
2. The chance of occurrence of error is less when compared with the existing system.
3. First, Enter the scores in the fields.
4. Next, request the prediction from web application.
5. Returns the list of colleges based on scores.
6. Predicts the eligibility score.
7. Recommending best suitable universities to students based on their GRE, GPA and TOEFL scores and also predicting admission probability.

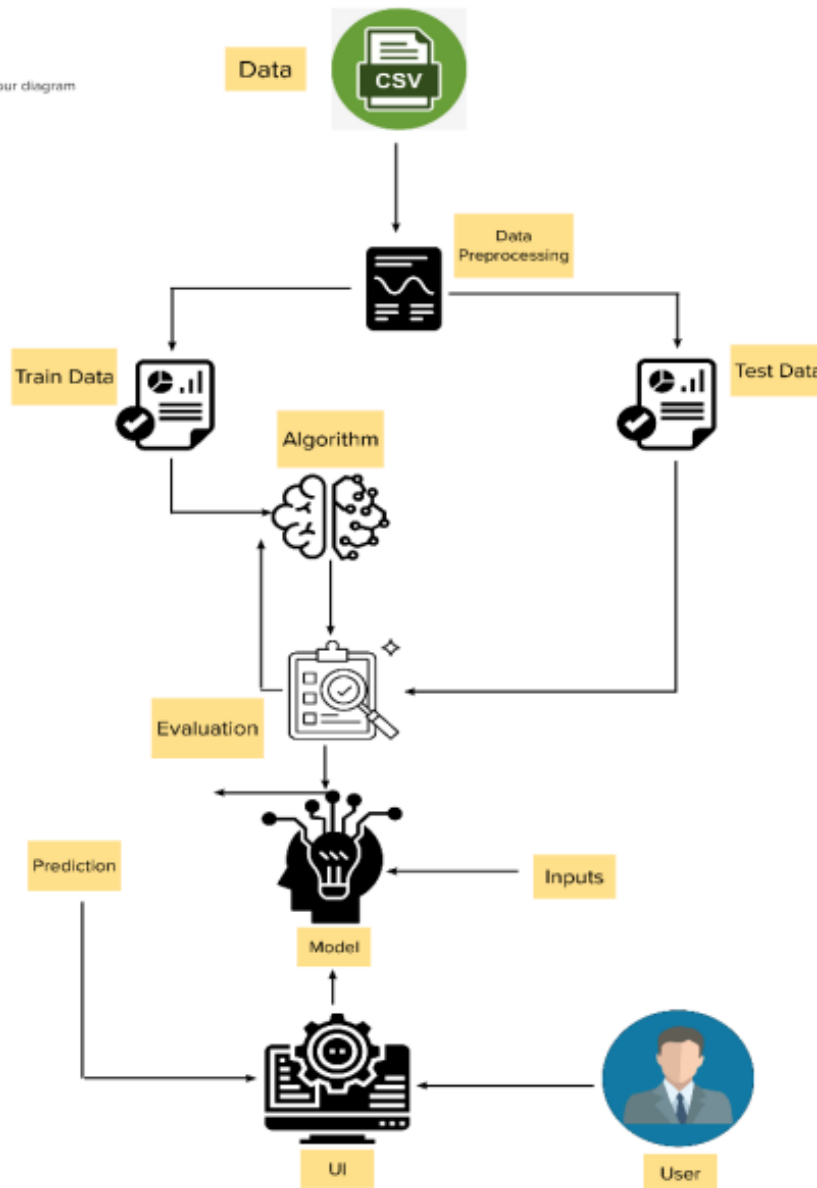

## Technical Architecture

## 5.3.User Stories

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Gmail	I can register & access the dashboard with Gmail Login	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can access the dashboard	High	Sprint-1
	Dashboard	USN-6	As a user, I can enter the scores.	I can find eligibility	High	Sprint-2
Customer (Web user)	Registration	USN-7	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-8	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-9	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
		USN-10	As a user, I can register for the application through Gmail	I can register & access the dashboard with Gmail Login	Medium	Sprint-1
	Login	USN-11	As a user, I can log into the application by entering email & password	I can access the dashboard	High	Sprint-1
	Dashboard	USN-12	As a user, I can enter the scores.	I can find eligibility	High	Sprint-2
Customer Care Executive	Support	USN-13	As a Customer Care Executive, responding to queries via telephone, live chat etc.	Immediate response is sent.	Medium	Sprint-3
		USN-14	As a Customer Care Executive, Ask for and act on customer feedback	Thank you for your valuable feedback	High	Sprint-2
		USN-15	As a Customer Care Executive, analyse customer data and communication to adjust customer care strategies.	We'll look into that issue soon & try to rectify it	Low	Sprint-3
Administrator	Administrative functions	USN-16	As an Administrator, design, develop, maintain and troubleshoot websites.	No issues are found	High	Sprint-3
		USN-17	As an Administrator, view and manage user permissions in an application.	Allows the user to manage permissions	Low	Sprint-4
		USN-18	As an Administrator, implementing user protocols & creating backups.	Data is synced & later recovered	Medium	Sprint-4
		USN-19	As an Administrator, resolving software problems & updating new features.	Update to new features	High	Sprint-4

## 6.PROJECT PLANNING & SCHEDULING

### 6.1. Sprint Planning & Estimation

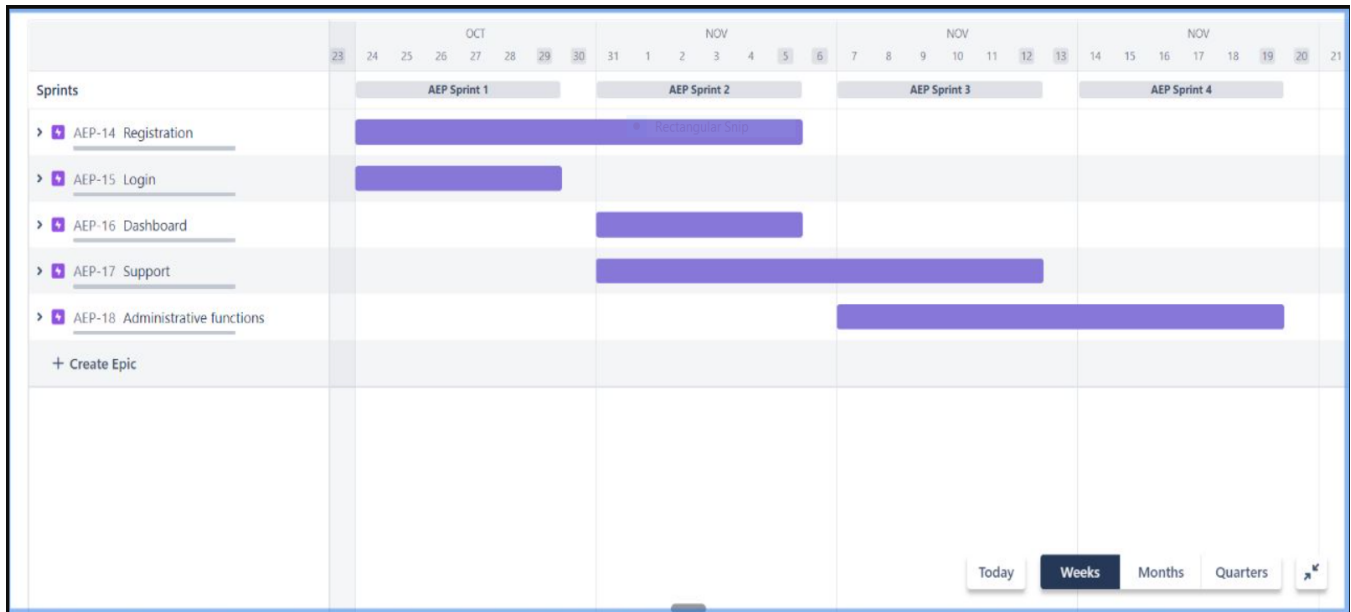

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	5	High	M Rajeswari
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	5	High	A Sweatha
Sprint-2		USN-3	As a user, I can register for the application through Facebook	5	Low	A Sweatha
Sprint-1		USN-4	As a user, I can register for the application through Gmail	5	Medium	Niranjani R
Sprint-1	Login	USN-5	As a user, I can log into the application by entering email & password	5	High	Sarika K
Sprint-2	Dashboard	USN-6	As a user, I can enter the scores.	5	High	Sarika K
Sprint-3	Support	USN-7	As a Customer Care Executive, responding to queries via telephone, live chat etc.	5	Medium	Sarika K
Sprint-2		USN-8	As a Customer Care Executive, Ask for and act on customer feedback	5	High	M Rajeswari
Sprint-3		USN-9	As a Customer Care Executive, analyse customer data and communication to adjust customer care strategies.	5	Low	Niranjani R
Sprint-3	Administrative functions	USN-10	As an Administrator, design, develop, maintain and troubleshoot websites.	5	High	M Rajeswari
Sprint-4		USN-11	As an Administrator, view and manage user permissions in an application.	5	Low	M Rajeswari

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-4		USN-12	As an Administrator, implementing user protocols & creating backups.	5	Medium	A Sweatha
Sprint-4		USN-13	As an Administrator, resolving software problems & updating new features.	5	High	Niranjani R

### 6.2. Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	15	6 Days	31 Oct 2022	05 Nov 2022	15	05 Nov 2022
Sprint-3	15	6 Days	07 Nov 2022	12 Nov 2022	15	12 Nov 2022
Sprint-4	15	6 Days	14 Nov 2022	19 Nov 2022	15	19 Nov 2022

## 6.3. Reports from JIRA

## 7. CODING & SOLUTIONING

### 7.1. Feature 1

- Analyzed university admission statistics
- Developed tools for matching university (in percentile) using CGPA,GRE (Verbal, Quantitative, Analytical Writing) scores
- Languages : Python
- Tools/IDE : Anaconda
- Libraries : Recommendation

```
1  import pickle
2  from flask import Flask , request, render_template

13	12	327	111	4	4	4.5	9	1	0.84	
14	13	328	112	4	4	4.5	9.1	1	0.78	
15	14	307	109	3	4	3	8	1	0.62	
16	15	311	104	3	3.5	2	8.2	1	0.61	
17	16	314	105	3	3.5	2.5	8.3	0	0.54	

## 8. TESTING

### 8.1. Test Cases

Test case ID	Feature Type	Component	Test Scenario	Pre-Requisite	Steps To Execute	Test Data	Expected Result	Actual Result	Status
LoginPage_TC_001	UI	Home Page	Verify the UI elements in Home Page		1.Enter URL and click go 2.Verify Home Page with below UI elements: a.GRE Score b.TOEFL Score c.University Rating d.SOP e.LOR f.CGPA g.Research	<a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a>	Application should show below UI elements: a.GRE Score b.TOEFL Score c.University Rating d.SOP e.LOR f.CGPA g.Research	Working as expected	Pass
LoginPage_TC_002	UI	Home Page	Verify the UI elements in Home Page		1.Enter URL and click go 2.Click the text box to enter scores 3.View the image displayed 4.Click submit button to know the prediction	<a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a>	1. Should be able to enter the scores 2. The image should be displayed on the right side. 3. We can know the chance of admit	Working as expected	Pass
LoginPage_TC_003	Functional	Web page	Verify user is able to predict the chance of admit		1.Enter URL( <a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a> ) and click go 2.Enter the scores in the given fields 3.Click on Submit button, once you have entered all the scores.	a.GRE Score - 334 b.TOEFL Score - 119 c.University Rating - 5 d.SOP - 5 e.LOR - 4.5 f.CGPA - 9.7 g.Research - Yes	Application should show 'You have a 95% chance to get the admission!'	Application should show 'You have a 95% chance to get the admission!'	Pass
LoginPage_TC_004	Functional	Web page	Verify user is able to predict the chance of admit		1.Enter URL( <a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a> ) and click go 2.Enter the scores in the given fields 3.Click on Submit button, once you have entered all the scores.	a.GRE Score - 327 b.TOEFL Score - 111 c.University Rating - 4 d.SOP - 4 e.LOR - 4.5 f.CGPA - 9 g.Research - Yes	Application should show 'You have a 84% chance to get the admission!'	Application should show 'You have a 84% chance to get the admission!'	Pass
LoginPage_TC_005	Functional	Web page	Verify user is able to predict the chance of admit		1.Enter URL( <a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a> ) and click go 2.Enter the scores in the given fields 3.Click on Submit button, once you have entered all the scores.	a.GRE Score - 311 b.TOEFL Score - 104 c.University Rating - 3 d.SOP - 3.5 e.LOR - 2 f.CGPA - 8.2 g.Research - Yes	Application should show 'You have a 61% chance to get the admission!'	Application should show 'You have a 65% chance to get the admission!'	Fail
LoginPage_TC_006	Functional	Web page	Verify user is able to predict the chance of admit		1.Enter URL( <a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a> ) and click go 2.Enter the scores in the given fields 3.Click on Submit button, once you have entered all the scores.	a.GRE Score - 298 b.TOEFL Score - 98 c.University Rating - 2 d.SOP - 4 e.LOR - 3 f.CGPA - 8.03 g.Research - No	Application should show 'You don't have a chance!'	Application should show 'You have a 55% chance to get the admission!'	Fail
LoginPage_TC_007	Functional	Web page	Verify user is able to predict the chance of admit		1.Enter URL( <a href="http://127.0.0.1:4000/">http://127.0.0.1:4000/</a> ) and click go 2.Enter the scores in the given fields 3.Click on Submit button, once you have entered all the scores.	a.GRE Score - 297 b.TOEFL Score - 96 c.University Rating - 2 d.SOP - 2.5 e.LOR - 2 f.CGPA - 7.43 g.Research - No	Application should show 'You don't have a chance!'	Application should show 'You don't have a chance!'	Pass

## 8.2. User Acceptance Testing

### 1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the University Admit Eligibility Predictor project at the time of the release to User Acceptance Testing (UAT).

### 2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	2	1	3
Duplicate	1	0	0	0	1
External	0	0	1	0	1
Fixed	0	1	1	0	2
Not Reproduced	0	1	0	0	1
Skipped	0	0	0	0	0
Won't Fix	0	1	0	0	1
Totals	1	3	4	1	9

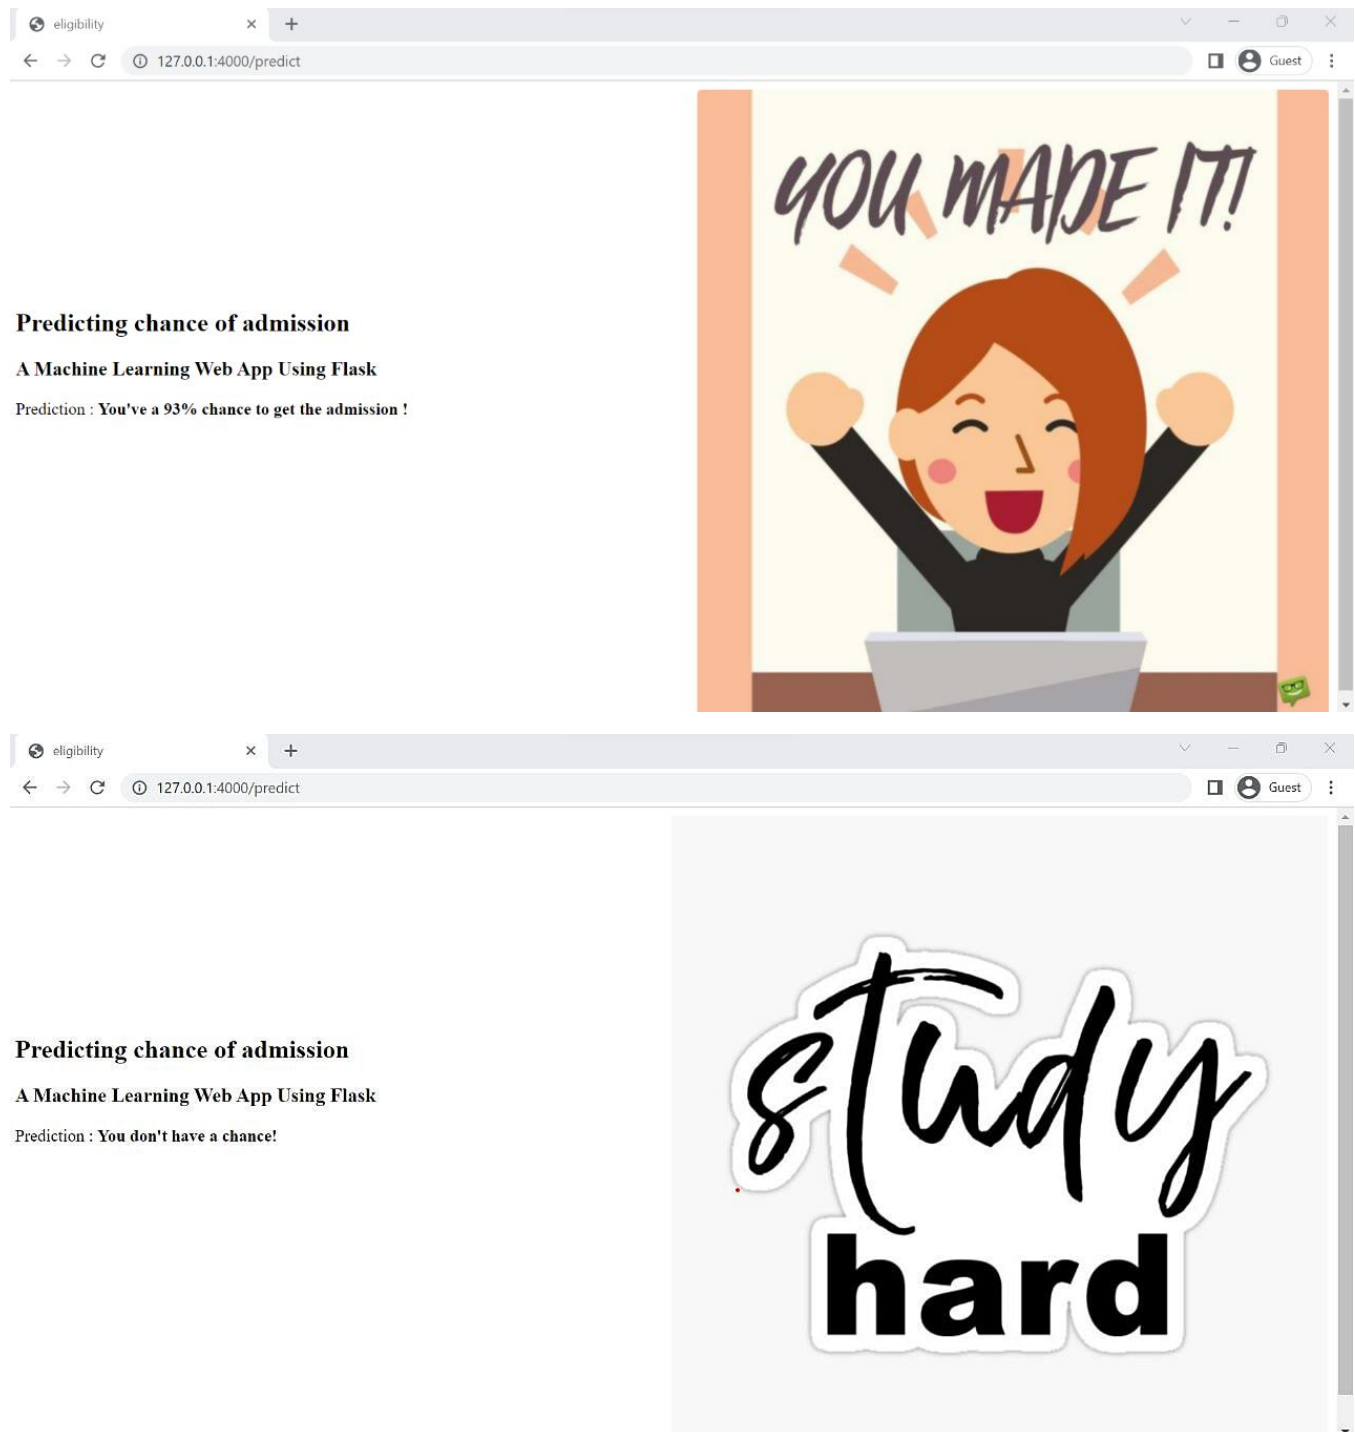

### 3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
View Home Page	10	0	3	7
Enter the scores	20	0	3	17
Click Submit button	2	0	0	2
Image displayed	10	0	4	6
Selecting from Drop down	5	0	0	5
Final Report Output	30	0	10	20
Version Control	5	0	2	3

## 9. RESULTS

### 9.1. Performance Metrics

## **10. ADVANTAGES**

- It helps student for making decision for choosing a right college.
- Here the chance of occurrence of error is less when compared with existing system.
- It is fast, efficient and reliable.
- Avoids data redundancy and inconsistency.
- Very user-friendly.
- Easy accessibility of data.
- It would be the easiest mode to predict the university/colleges person is applicable for as well as it would unbiased and totally transparent.
- Individually would no more need to depend upon the consultancies who may be slightly deviated towards the list of colleges/university that may be having contract with them.
- Moreover applying to only that colleges/university where the student has genuine chance would even reduce application process.
- Additionally living expense of the area where colleges/university is located would also be provided on website.

## **DISADVANTAGES**

- Required active internet connection.
- System will provide inaccurate results if data entered incorrectly.
- Other factors such as changes in policies by the university or by the country can also affect chances of admissions in a way that is beyond the scope of this project.
- Admissions also depend on the individual university's policy regarding the intake of foreign students and is not modeled by our system.

## 11. CONCLUSION

Student admission problem is very important in educational institutions. In this project addresses machine learning models to predict the chance of a student to be admitted. This will assist students to know in advance if they have a chance to get accepted. In this paper, machine learning models were performed to predict the opportunity of a student to get admitted to a master's program. The machine learning models included are multiple linear regression, k nearest neighbor, random forest, and Multi layer Perceptron. Experiments show that the Multi layer Perceptron model surpasses other models. As for the future work, more models can be conducted on more datasets to learn the model that gives the best performance.

## 12. FUTURE SCOPE

The future scope of this project is very broad. Few of them are:

- This can be implemented in less time for proper admission process.
- This can be accessed anytime anywhere, since it is a web application provided only an internet connection.
- The user had not need to travel a long distance for the admission and his/her time is also saved as a result of this automated system.
- The scope of this project is a web application that allows users to enter their academic data and get predictions of their chances of admissions in the university tier of their choosing.
- It also provides an analysis based on the data set used that shows how the different affect chances of admissions.
- A Database will also be implemented for the system so that students can save their data and review and edit it as they progress with the most recent predictions being saved with their profile.
- Future work in the project could include weighing in the features that have been ignored as of yet like percentage seats for Foreign Students.
- Other criterion's like Co-curricular achievements, Leadership positions held, job experience etc can also be included as metrics for the model.

## 13. APPENDIX

### 13.1. Source Code

---

```
1  import pickle
2  from flask import Flask , request, render_template
3  from math import ceil
4  app = Flask(__name__)
5  model = pickle.load(open("model.pkl","rb"))
6
7  @app.route('/')
8  def index():
9      return render_template('index.html')
10
11 @app.route('/predict',methods = ['GET','POST'])
12 def admin():
13     gre=(eval(request.form["gre"])-290)/(340-290)
14     tofl=(eval(request.form["tofl"])-92)/(120-92)
15     rating=(eval(request.form["rating"])-1.0)/4.0
16     sop=(eval(request.form["sop"])-1.0)/4.0
17     lor=(eval(request.form["lor"])-1.0)/4.0
18     cgpa=(eval(request.form["cgpa"])-6.7)/(10.0-6.7)
19     research=request.form["research"]
20     if (research=="Yes"):
21         research=1
22     else:
23         research=0
24     preds=[[gre,tofl,rating,sop,lor,cgpa,research]]
25     xx=model.predict(preds)
26     if (xx>0.5):
27         return render_template("chance.html",p=str(ceil(xx[0]*100))+"%")
28     return render_template("nochance.html")
29 if __name__ == '__main__':
30     app.run(debug = False, port=4000)
```
